

# WHO reform: governance

This report responds to decision EB146(21) (2020) on WHO reform, in which the Executive Board decided to request the Director-General to undertake several steps, including:

(a) with respect to each resolution and decision that is six or more years old and has an unspecified reporting requirement:

(i) to outline any related reporting requirements that might be considered as having superseded the original one(s); to provide an indication of when any reporting to the governing bodies has taken place in response to the relevant mandate; and to describe any ongoing work related to the subject matter of the resolution or decision;

(ii) to provide criteria for proposing exceptions to the six-year limitation on reporting;<sup>1</sup>

(iii) applying the criteria mentioned in paragraph (1)(a)(ii), to provide a list of resolutions and decisions in which the reporting requirements are recommended for sunseting;

(b) with respect to each resolution and decision that is less than six years old and has an unspecified reporting requirement:

(i) to outline any related reporting requirements that might be considered as having superseded the original one(s); to provide an indication of when any reporting to the governing bodies has taken place in response to the relevant mandate; and to describe any ongoing work related to the subject matter of the resolution or decision;

(ii) applying the criteria mentioned in paragraph (1)(a)(ii), to provide a recommendation with respect to the reporting cycle;

(c) with regard to reporting requirements on similar subjects, to make recommendations on the consolidation and streamlining of reporting requirements in the context of the sunseting exercise;

The Health Assembly decided in decision WHA72(22) (2019), paragraph 4, that “resolutions and decisions should provide for clear reporting requirements, including reporting cycles of up to six years, with biennial reports, unless otherwise advised by the Director-General”.

The proposed criteria for exceptions to the six-year limitation on reporting could include:

- reporting related to ongoing efforts for the eradication or elimination of diseases, such as poliomyelitis and dracunculiasis;
- standing items on the agenda because of their strategic relevance to the governing bodies, such as the implementation of the International Health Regulations, smallpox, the Infrastructure Fund, Collaboration within the United Nations system and with other intergovernmental organizations;
- the alignment of reporting with the duration of a strategy or action plan.

---

<sup>1</sup> Criteria could include reporting requirements in resolutions and decisions related to ongoing efforts for the eradication of diseases, such as poliomyelitis and dracunculiasis.

In recent years, reporting requirements on health workforce and on non-communicable diseases have been consolidated. Reporting on neglected tropical diseases and on maternal, infant and young child nutrition will also be consolidated and streamlined, if the respective resolutions are adopted by the Seventy-third World Health Assembly. Further recommendations for consolidating and streamlining reporting requirements are mentioned in Annexes 1 and 2.

The recommendations mentioned in Annexes 1 and 2 will be presented at an informal consultation of Member States prior to the 148th session of the Executive Board.

**ANNEX 1 - resolutions and decisions that are six or more years old and have an unspecified reporting requirement**
